CHINA reported 15,141 cases on 2/13 as data catch up. These totals were distributed as % of New Cases back to 12/31/2019 to SMOOTH SPIKE

Definitions:

- #Location: Countries
- Cases: Cumulative Amount per Location
- Days: Cumulative days running since FIRST reported case in Country
- CASE/Days: Cumulative CASES divided by Days since FIRST reported Case
- Deaths: Cumulative Amount per Location
- Deaths/Days: Cumulative Deaths divided by Days since FIRST reported Case
- Latest 1 Day: Total case reported in latest report
- 1 Day%: The Latest 1 Day Total divided by the Cumulative Number of Cases
- Death%: The Total Deaths divided by Cumulative Number of Cases
- Days to Double: 72 / 1 Day% * 100. Rule of 72: This gives the number of days to Double the total number of Cases given the Latest 1 day total
- 1 Week: Estimates the number of Cases based upon the 2X Days rate one week from now. If 2X Days = 7 Then the 1 Week total would be 2 X the number of current Cases. Fewer days grows exponentially faster
- 30 Days: Estimates the number of Cases based upon the 2X Days rate 30 Days from now
- 30 Day Dead: Death% multiplied by the 30 Days Case Number Estimate
- 60 Days: Estimates the number of Cases based upon the 2X Days rate 60 Days from now
